The Gresham House Difference - Back Cushions

All Gresham House loose-back cushions feature a minimum of **three internal baffled compartments**, designed to distribute fill evenly, reduce shifting and support a more consistent cushion shape and feel over time.
Each back cushion option is designed to offer a distinct balance of **comfort, appearance and maintenance**, allowing designers to select the feel best suited to their project.

Cushion Care & Maintenance

Loose-back cushions contain soft, loose fill without a stabilizing foam core. Natural shifting, settling and compression are expected with use. Cushion size, fabric type and frequency of use influence the degree of movement and maintenance required. Regular fluffing, reshaping and rotation (where possible) help maintain cushion loft and appearance.
